

Assignment1

September 2, 2025

```
[6]: var = "Hello world!"  
     print(var)
```

Hello world!

```
[7]: print(var[0:5])
```

Hello

```
[9]: print(type(1))  
     print(type(1.0))  
     print(type("1"))  
     # int is for integer, which is a whole number. 1.0 is a float, which is a  
     # ↪ number that includes decimals, unlike integers.  
     # a string is an order of characters
```

```
<class 'int'>  
<class 'float'>  
<class 'str'>
```

```
[11]: import math  
      radius = 5  
      area = round((math.pi * (radius ** 2)), 2)  
      print(area)
```

78.54
